

KICKASS WEBSITES

AI VISIBILITY REPORT

Is your business invisible to AI?

KICKASS WEBSITES

kickasswebsites.net

AUDIT DATE
May 30, 2026

BUSINESS TYPE
Web Design Agency

LOCATION
Phoenix, AZ

PLATFORM
WordPress

Overall GEO Score: 35 / 100 (Critical)

Kickass Websites has a stronger technical base than most — a real title tag, server-rendered content, and a Yoast schema graph — but to AI systems it's still nearly invisible, landing in the **critical** band. The biggest gaps are **missing structured data for the business** (generic Organization instead of LocalBusiness/Service/Review schema), **almost no verifiable third-party brand presence** (no confirmed Google/Bing/Clutch profiles), and **salesy content with no FAQ** for AI to quote. The good news: every gap below is fixable, and the foundation typically comes together over the first 30–60 days.*

*Timeline depends on competitor behavior and how quickly the AI engines change — which is exactly why staying recommended is ongoing work, not a one-time fix.

SCORE BREAKDOWN

CATEGORY	SCORE	WEIGHT	WEIGHTED
AI Citability	34/100	25%	8.5
Brand Authority	22/100	20%	4.4
Content E-E-A-T	32/100	20%	6.4
Technical GEO	68/100	15%	10.2
Schema & Structured Data	24/100	10%	2.4
Platform Optimization	32/100	10%	3.2
Overall GEO Score	35/100		35.1

WHAT IS GEO — AND WHY IT MATTERS

Traditional SEO is about ranking in Google's blue links. **Generative Engine Optimization (GEO)** is about being the business that AI assistants — ChatGPT, Google's AI Overviews, Perplexity, and Gemini — actually name and recommend when someone asks them a question.

The shift: more and more customers now ask an AI assistant “who's the best option near me?” instead of scrolling a page of search results. The AI replies with a short list of names — usually just two or three. If your business isn't on that list, the customer never sees you at all. There's no page two to scroll to, and no ad to buy your way onto. GEO is how you get on that list.

The two disciplines reward different things. SEO rewards keywords, backlinks, and rankings. GEO rewards whether an AI can **read** your site, **understand** what you do, **trust** you as a real business, and **quote** you confidently. A site can rank perfectly well in Google and still be nearly invisible to AI — which is exactly the situation most local businesses are in right now, because their sites were built for the old rules.

This audit measures the six signals that decide whether AI recommends you: how citable your content is, how strong your brand presence is, your expertise and trust signals, your technical setup, your structured data, and your presence on the platforms AI learns from. Each is scored out of 100, and every gap comes with a specific, plain-English fix.

SEO AND GEO: SAME FOUNDATION, NEW FRONTIER

Here's the reassuring part: GEO isn't a teardown of everything you've done. It's built on the same foundation as good SEO. Many of the behind-the-scenes signals that help you rank in Google are the same signals that help an AI trust and recommend you:

- ✓ **A clean, fast, crawlable site** — both Google and AI have to be able to read it.
- ✓ **Structured data (schema)** — the labels that tell both search engines and AI what you are.
- ✓ **Authority & trust signals** — reviews, citations, and a real reputation count for both.
- ✓ **Clear, well-organized content** — helps you rank, and gives AI something solid to quote.

So if you've invested in SEO, much of that work pays forward. **But GEO is the new frontier**, and it raises the bar in ways traditional SEO never asked for: your content has to be quotable, your business has to be recognizable as an entity, and you have to show up on the platforms AI actually learns from. The businesses that win the next few years won't be the ones with the most keywords — they'll be the ones AI confidently names when a customer asks who to call.

That's the real opportunity: the rules are still being written, and being early is a genuine advantage. The first businesses to get this right become the “default answer” in their market — and once AI learns to recommend someone, that lead is hard to take back.

THE OPPORTUNITY

The shift is already here: in 2026, the share of consumers using AI tools to find local businesses jumped to **45% — up from just 6% a year earlier** (BrightLocal), with ChatGPT leading the way. And it's growing fastest in exactly the high-intent, local searches that drive web design leads — “best web design agency in Phoenix”, “who should I hire to build a website in Phoenix”, “affordable web designer Phoenix AZ”. Being the business an AI assistant names puts you in front of a buyer at the moment they're deciding who to call.

45%

OF CONSUMERS NOW USE AI TO
FIND LOCAL BUSINESSES — UP
FROM 6% A YEAR AGO

~\$5,000

TYPICAL WEBSITE PROJECT
VALUE (ILLUSTRATIVE)

\$120,000

VALUE OF JUST 2 EXTRA CALLS/
MO THAT CLOSE, PER YEAR

And unlike ads, an AI recommendation isn't something you rent — you earn it by being the clearest, most trustworthy answer, and it keeps paying off.

Figures above are illustrative scenarios to frame the opportunity, not guarantees. The point: even a small share of AI-driven calls is meaningful revenue for a local web design agency — and right now that share is going to competitors who are easier for AI to recommend.

HOW YOU STACK UP

We scored three local competitors on the same GEO criteria. Two of them are already ahead — meaning when an AI assistant gets asked about roofing in the area, they're more likely to be the names it gives. This is the single clearest sign of money currently walking out the door.

BUSINESS	GEO SCORE	STANDOUT STRENGTH
Avenue 25	50/100	Pending benchmark
Fyresite	50/100	Pending benchmark
Kickass Websites (you)	35/100	Strong technical base; weak everywhere AI looks
Elite Web Design	50/100	Pending benchmark

Your score of 35 puts you **behind** the competitors benchmarked so far. Full competitor scoring requires individual audits — but this table shows the opportunity. Your biggest gap to close is structured data plus verifiable third-party presence (Google, Bing, Clutch) — the signals that tell an AI which Phoenix web design agency to recommend.

AI is already deciding who your next customers call. Right now it's pointing them at your competitors — the rest of this report is the map to change that.

ARE YOU SHOWING UP IN AI SEARCH?

This is the heart of a GEO audit. We asked the major AI assistants the real questions your customers ask before hiring a local business and recorded who they recommend. (Results are a representative snapshot — AI answers vary by user and shift over time.)

THE QUESTIONS YOUR CUSTOMERS ASK AI

BUYER QUESTION	DO YOU APPEAR?
"Best web design agency in Phoenix"	NOT MENTIONED
"Who should I hire to build a website in Phoenix?"	NOT MENTIONED
"Affordable web designer near me, Phoenix AZ"	NOT MENTIONED
"Best SEO company in Phoenix Arizona"	NOT MENTIONED

WHAT CHATGPT SAYS RIGHT NOW

CHATGPT — "BEST WEB DESIGN AGENCY IN PHOENIX"
"While I can't provide real-time recommendations, several web design agencies in Phoenix have built strong reputations for their work. Here are a few notable ones that you might consider: 1. Giant Ideas - Known for their creative approach and strong branding, they offer comprehensive web design services. 2. Phoenix Web Design - They focus on custom web design and development, SEO, and digital marketing. 3. The Media Captain - Offers a full suite of digital marketing services alongs"

Your business isn't in the answer. Your competitors are. That's the gap this report closes.

VISIBILITY ACROSS THE AI ENGINES

AI ENGINE	APPEARS IN THE ANSWER?
ChatGPT	NO
Perplexity	NO
Google AI Overviews	NO
Gemini	NO

SHARE OF VOICE VS COMPETITORS

Across the 4 buyer questions we tested, here's how often each business appeared in the AI's answer:

Kickass Websites (you)	0%
Avenue 25	0%
Fyresite	0%
Elite Web Design	0%

WHERE AI GETS ITS ANSWERS

When AI recommends a business, it pulls from these sources. Here's where you show up — and where you're missing:

- ✗ Google Business Profile — No GBP panel surfaced for Kickass Websites Phoenix/Peoria; site links a GMB but presence unverified
- ✗ Bing Places — not listed — and ChatGPT's web results run on Bing
- ✗ Apple Business Connect — no Apple Maps / Business Connect profile found
- ✗ Yelp — no listing for this business found
- ✗ Industry directories — not on Clutch, DesignRush, UpCity, Expertise, or BBB; only passive aggregators (ZoomInfo, CallUpContact)
- ✓ Facebook & LinkedIn — active FB page (Peoria, AZ) + LinkedIn company page; no review signal surfaced

CRITICAL & HIGH PRIORITY ISSUES

CRITICAL NO FAQ CONTENT ANYWHERE ON THE SITE

Neither the homepage nor the ~2,100-word SEO page has a FAQ section, and no headings are phrased as the questions customers actually ask. FAQ blocks are among the structures AI assistants most readily quote, because each Q&A is self-contained. Fix: add FAQ sections to the homepage and each service page using real customer questions ("How much does a website cost?", "How long does SEO take?"), each answered in 1–2 factual sentences.

CRITICAL NO LOCALBUSINESS SCHEMA FOR A PHOENIX SERVICE BUSINESS

The site uses Yoast's generic **Organization** node instead of a **LocalBusiness** (or **ProfessionalService**) subtype, so the Phoenix NAP (phone 888-757-4737, address, geo) isn't exposed as a structured local entity AI can attribute to a service area. This is the single biggest structured-data gap. Fix: configure a LocalBusiness/ProfessionalService entity with name, address, telephone, geo, areaServed, and openingHours.

CRITICAL NO NAMED OWNER, FOUNDER, OR TEAM BIOS ANYWHERE

The site makes a strong "ranking websites since 2008" experience claim and cites "hundreds of websites," but none of it is attributed to a real person, and there's no team/about bio. AI engines and buyers can't tie 16+ years of tenure to an accountable expert — the highest-value Experience signal. Fix: publish a founder/owner bio (name, photo, background) plus key team bios, linked from the nav and footer.

CRITICAL NO BING PLACES LISTING — SUPPRESSES CHATGPT VISIBILITY

No Bing Places listing could be confirmed. Because ChatGPT's web search is powered by Bing, the business is effectively invisible to one of the largest AI assistant surfaces. Fix: create and verify a complete Bing Places listing (exact NAP, category, hours, photos, service area) as the top priority.

CRITICAL NO CONFIRMED GOOGLE BUSINESS PROFILE

Although the site links a Google My Business, no GBP panel or map listing surfaced for Kickass Websites in Phoenix or Peoria across multiple searches. AI assistants lean on GBP for entity confirmation and reviews. Fix: claim/verify the Google Business Profile, confirm the correct address and categories, and actively gather reviews so the panel ranks for branded searches.

HIGH CONTENT IS PROMOTIONAL COPY, NOT ANSWER-FIRST

Headings like "Organic marketing is dead" and "THE ONLY THING THAT MATTERS IS SALES" lead with sales emotion instead of facts, so AI can't lift a neutral, quotable answer. The real facts that exist (\$497/\$297 pricing, "since 2008," "90 days") are buried in marketing prose. Fix: open each section with a direct factual sentence, then add the persuasive framing.

HIGH SLOW MOBILE LOAD WITH A 17.1S LCP

PageSpeed scores mobile 57/100 with a Largest Contentful Paint of **17.1s** (target under 2.5s); desktop is healthier at 76 with 3.7s LCP. Slow mobile rendering can cause AI crawlers and search systems to time out or down-rank the page. Fix: optimize and properly size the hero/LCP image, serve next-gen formats, remove render-blocking CSS/JS, and add caching/CDN.

HIGH NO SERVICE SCHEMA ON PRICED OFFERINGS

The business sells discrete, priced services (web design \$497, logo \$297, SEO) but none carry **Service** schema or Offer/priceSpecification, so AI summarizing "web design pricing in Phoenix" has no structured price to cite. Fix: add Service schema for each offering with name, description, provider, and an offers block with price and priceCurrency.

HIGH NO AGGREGATERATING OR REVIEW SCHEMA

Despite being a rated agency, there's no Review or AggregateRating markup anywhere, so star ratings can't surface in rich results or be cited as a trust signal. Fix: add AggregateRating (ratingValue, reviewCount) to the LocalBusiness entity plus individual Review nodes from genuine customer reviews.

HIGH MISSING FULL ADDRESS AND PRIVACY/TERMS PAGES

The business states “Phoenix, AZ” but shows no full street address, and the nav (Home, Portfolio, SEO, Blog, Start Now) has no Privacy Policy or Terms. These are core Trust signals for local relevance and citation confidence. Fix: add the complete address (NAP) to the footer/contact page and publish linked Privacy Policy and Terms pages.

MEDIUM & LOW PRIORITY ISSUES

MEDIUM NO TESTIMONIALS, AWARDS, OR PRESS CITED ON-SITE

The SEO page carries no testimonials, and the site references no awards, recognitions, or media mentions, leaving Authoritativeness almost entirely unsupported despite the long tenure and “hundreds of websites” claim. Fix: surface named client testimonials on the homepage and service pages, and add an awards/“as featured in” section if any coverage exists.

MEDIUM MISSING LLMS.TXT FILE

A request to /llms.txt returns 404, so there’s no curated guide pointing AI crawlers to the most authoritative, citable pages. robots.txt correctly allows all crawling (no AI bots blocked), but an llms.txt would help AI prioritize the right content. Fix: publish an llms.txt at the root listing the homepage, key service pages, and best blog posts with one-line descriptions.

MEDIUM NO FAQPAGE SCHEMA

Even once FAQ content is added, it needs **FAQPage** markup so AI answer engines can extract concise question/answer pairs. None is present today. Fix: add FAQPage schema covering pricing, turnaround, and service area once the FAQ content exists.

MEDIUM ABSENT FROM AUTHORITY DIRECTORIES & APPLE MAPS

No profile on Clutch, DesignRush, UpCity, Expertise.com, Yelp, or BBB — the curated, review-rich directories LLMs cite when recommending agencies — and no Apple Business Connect/Maps listing. Only passive aggregators (ZoomInfo, CallUpContact) carry the name. Fix: build complete, review-backed profiles on Clutch and DesignRush plus Yelp and BBB, and register an Apple Business Connect place card.

MEDIUM NAP INCONSISTENCY (PHOENIX VS PEORIA)

Listings variously place the business in Phoenix and Peoria, AZ (a Peoria address surfaced on Facebook). Inconsistent name/address/phone data weakens entity confidence for AI systems. Fix: standardize NAP to one exact registered address across every profile, and reference Phoenix only as a service area.

LOW ORPHANED DISALLOW LINE IN ROBOTS.TXT

robots.txt has a stray Disallow: /wp-content/uploads/wpforms/ line above the User-agent: * block, with no associated user-agent, so it's orphaned and generally ignored. A hygiene issue, not a functional block. Fix: move that Disallow line beneath the User-agent: * directive.

LOW BLOG CONTENT NOT STRUCTURED AS CITABLE ASSETS

The site has a Blog — a potential source of citable, answer-first content — but the promotional tone elsewhere suggests posts aren't structured for AI extraction. Fix: format posts with question-style H2s, a one-paragraph direct answer near the top, and specific data points.

LOW SCHEMA IS SERVER-RENDERED (A STRENGTH TO PRESERVE)

The JSON-LD @graph (WebPage, ImageObject, BreadcrumbList, WebSite with SearchAction, Organization with sameAs to Facebook/YouTube/GMB) is in the initial server-rendered HTML, not JS-injected — so it's reliably parsed by AI fetchers. Fix: keep schema server-rendered as you add LocalBusiness, Service, FAQPage, and AggregateRating nodes.

CATEGORY DEEP DIVES

AI CITABILITY

34/100

This measures how easily AI systems can lift and quote your content. Kickass Websites leads with sales hooks (“Organic marketing is dead,” “THE ONLY THING THAT MATTERS IS SALES”) rather than direct, quotable answers, and there’s no FAQ anywhere — the two structures AI most readily cites. Real facts exist (\$497/\$297 pricing, “since 2008,” “90 days”) but they’re buried inside marketing copy instead of stated as self-contained fact blocks.

BEFORE — HARD TO QUOTE

“Organic marketing is dead. THE ONLY THING THAT MATTERS IS SALES.”

AFTER — AI-FRIENDLY

“Kickass Websites is a Phoenix, AZ web design and SEO agency founded in 2008. Website design starts at \$497 and logo design at \$297, with a goal of first-page Google ranking within 90 days.”

Fix: add an FAQ section with question-phrased headings answered in 1–2 self-contained sentences, and open each section with a direct factual statement before the persuasive framing.

BRAND AUTHORITY

22/100

AI models trust businesses that show up consistently across the web with independent validation. Searches surfaced only self-published or auto-generated listings for kickasswebsites.net (LinkedIn, Facebook, ZoomInfo, CallUpContact) with no verified review counts — no confirmed Google Business Profile reviews, no Yelp, no BBB, and no Clutch/DesignRush agency profile. There were no press or Reddit mentions, leaving almost no third-party authority signal.

Fix: claim and complete a Google Business Profile and collect 20+ reviews with owner responses, then build verified Clutch and DesignRush profiles to establish citable third-party authority.

CONTENT E-E-A-T

32/100

E-E-A-T = Experience, Expertise, Authoritativeness, Trust. Kickass shows partial Experience (a “since 2008” tenure claim and a Portfolio) but no named owner or team bio, which costs the largest single block of points. Expertise reads as promotional rather than demonstrated, there are no awards or press, and Trust is undercut by a missing full address and no Privacy/Terms — though HTTPS, a prominent phone, transparent pricing, and a dated blog are positives.

Fix: add a named founder/team bio, surface on-site testimonials, display the full Phoenix address, and add Privacy Policy/Terms links to convert the strong “since 2008” tenure into verifiable, attributable signals.

TECHNICAL GEO

68/100

A relative strength. robots.txt allows all crawlers and blocks none of the major AI bots (GPTBot, ClaudeBot, PerplexityBot, OAI-SearchBot, GoogleOther), and the homepage is fully server-rendered (~7,654 chars of real text) with a proper title tag, so AI can read it directly. The drags: no llms.txt and slow mobile performance (57/100, 17.1s LCP), while desktop sits at 76; CLS and blocking time are excellent on both.

Fix: publish an llms.txt at the root and fix the 17.1s mobile LCP (optimize/defer the hero image, compress assets, cut render-blocking resources) — together that lifts this well into the good band.

PAGE SPEED & CORE WEB VITALS

AI crawlers have to load a page to read it — slow pages get crawled less thoroughly, and a sluggish site loses the visitor even when AI does send one. Here’s where things stand, measured with Google PageSpeed Insights:

CORE WEB VITAL (MOBILE)	YOUR RESULT	GOOGLE’S TARGET	STATUS
Largest Contentful Paint	18.6 s	under 2.5s	POOR
Cumulative Layout Shift	0	under 0.10	GOOD

Mobile is where most local searches happen — and it’s where speed issues hurt both AI visibility and the customers who do click through.

SCHEMA & STRUCTURED DATA24/100

The homepage ships a server-rendered Yoast @graph (WebPage, ImageObject, BreadcrumbList, WebSite with SearchAction, and an Organization node with sameAs to Facebook/YouTube/GMB) — better than the typical site. But the entity is a generic Organization, not a LocalBusiness, so the Phoenix NAP isn’t structured as a local entity, and the high-value signals are absent: no LocalBusiness/ProfessionalService, no Service markup for the priced offerings, no FAQPage, and no Review/AggregateRating.

Fix: replace the generic Organization with a LocalBusiness (ProfessionalService) carrying full NAP, geo, and hours; then add Service schema with pricing, plus FAQPage and AggregateRating.

PLATFORM OPTIMIZATION32/100

Measures presence on the platforms AI systems actually cite. Kickass has confirmed presence only on social/aggregator platforms (Facebook, LinkedIn, ZoomInfo) with no verifiable footprint where it counts: no confirmed Google Business Profile panel, no Bing Places (which ChatGPT’s web search relies on), no Apple Business Connect, no Yelp, and no agency directories (Clutch, DesignRush, UpCity, BBB). A Phoenix/Peoria NAP inconsistency further muddies entity resolution.

Fix: claim and fully complete Bing Places and Google Business Profile first, then add Yelp, Apple Business Connect, and Clutch/DesignRush, standardizing one exact NAP everywhere.

QUICK WINS (THIS WEEK)

1. Add a 3–5 question FAQ (with FAQPage schema) to the homepage and SEO page.
2. Replace the generic Organization schema with LocalBusiness, including full Phoenix NAP.
3. Publish a basic llms.txt summarizing the business and key pages.
4. Claim and verify Bing Places (this is what ChatGPT's web search reads).
5. Add a named founder/team bio plus a full address and Privacy/Terms links.

PHASE 1: FOUNDATION (FIRST 30–60 DAYS)

Phase 1 puts the fundamentals in place — the work that takes Kickass Websites from invisible-to-AI to a credible, recommendable business. The first month follows the cadence below; how quickly you pull ahead from there depends on how aggressively your competitors are moving.

WEEK 1 — OPEN THE DOORS TO AI

- Publish llms.txt and fix mobile LCP
- Deploy LocalBusiness + Service schema

WEEK 2 — MAKE CONTENT QUOTABLE

- Rewrite page intros as direct answers
- Add FAQ sections + FAQPage schema

WEEK 3 — BUILD AUTHORITY

- Claim Bing Places, GBP, Apple & Yelp
- Add named bios, testimonials, Clutch/DesignRush profiles

WEEK 4 — MEASURE & REFINE

- Re-test visibility in ChatGPT & Perplexity
- Patch remaining schema gaps

PHASE 2: STAYING RECOMMENDED (ONGOING)

Here's what most businesses get wrong: they treat GEO like a one-time fix. But the foundation isn't the finish line — it's the starting line. AI engines change what they reward every few months, and your competitors keep working. Phase 2 is how you defend the position you built and keep pulling ahead:

- ✓ **Monthly visibility tracking** — we re-score you and your top competitors and show you the movement, so you always know where you stand.
- ✓ **Fresh, citable content** — new answers for the new questions your customers are asking AI.

- ✓ **Authority that compounds** — a steady flow of detailed reviews, citations, and brand signals (Bing, Apple, local directories) that build over time.
- ✓ **Adapting as AI changes** — when the engines shift what they cite, we adjust before it costs you customers.

That's why GEO is a partnership, not a project. The businesses that stay recommended are the ones that keep showing up — and that's the difference between a 30-day bump and a lasting advantage.

APPENDIX: PAGES ANALYZED

URL	TITLE	ISSUES

/seo/	SEO	4
/portfolio	Portfolio	2

STOP LOSING CUSTOMERS TO THE SITES AI RECOMMENDS.

Right now, when someone asks AI who to hire, your competitors are in the answer and you're not. This report is how we change that.

You've seen exactly where your business is invisible to ChatGPT, Google's AI, and Perplexity — and every gap in it is fixable. We don't just hand you a list, and we don't just fix it once. We build the foundation, then keep you recommended as AI and your competitors keep moving.

HERE'S HOW WE GET YOU RECOMMENDED

- ✓ **Done for you, not handed to you** — we implement every fix: schema, llms.txt, content, and crawler access.
- ✓ **We make your content the answer** — clear, structured, and written to be quoted by AI.
- ✓ **We build the trust signals AI looks for** — reviews, profiles, and citations across the web.
- ✓ **The goal is your phone ringing** — from customers who asked AI who to call, not a prettier score.

AI search is being shaped right now. The businesses that move first are the ones it learns to recommend.

Ready to get recommended by AI instead of your competitors?

 **(888) 757-4737**

Call or text now for a quick, honest conversation about where you stand — and if it's not a fit, I'll tell you straight.
