AI VISIBILITY REPORT

Is your business invisible to AI?

GENCON GENERATOR RENTAL

genconofmichigan.com

AUDIT DATE
May 30, 2026

BUSINESS TYPE
Emergency Generator Rental

LOCATION
Detroit, MI

PLATFORM
WordPress

Overall GEO Score: 33 / 100 (Critical)

Gencon Generator Rental has a genuinely fast, server-rendered website — but to AI systems it is nearly invisible, landing in the **critical** band. The biggest gaps are **no structured data for the business, almost no E-E-A-T or third-party brand presence**, and **missing listings on the platforms AI engines actually cite** (Bing, Apple). Add to that an empty homepage title tag and content fragmented across several legacy domains, and AI engines have no clean, trusted entity to recommend. The good news: every gap below is fixable, and the foundation typically comes together over the first 30–60 days.*

*Timeline depends on competitor behavior and how quickly the AI engines change — which is exactly why staying recommended is ongoing work, not a one-time fix.

SCORE BREAKDOWN

CATEGORY	SCORE	WEIGHT	WEIGHTED
AI Citability	38/100	25%	9.5
Brand Authority	31/100	20%	6.2
Content E-E-A-T	15/100	20%	3.0
Technical GEO	80/100	15%	12.0
Schema & Structured Data	5/100	10%	0.5
Platform Optimization	18/100	10%	1.8
Overall GEO Score	33/100		33.0

WHAT IS GEO — AND WHY IT MATTERS

Traditional SEO is about ranking in Google's blue links. **Generative Engine Optimization (GEO)** is about being the business that AI assistants — ChatGPT, Google's AI Overviews, Perplexity, and Gemini — actually name and recommend when someone asks them a question.

The shift: more and more customers now ask an AI assistant “who's the best option near me?” instead of scrolling a page of search results. The AI replies with a short list of names — usually just two or three. If your business isn't on that list, the customer never sees you at all. There's no page two to scroll to, and no ad to buy your way onto. GEO is how you get on that list.

The two disciplines reward different things. SEO rewards keywords, backlinks, and rankings. GEO rewards whether an AI can **read** your site, **understand** what you do, **trust** you as a real business, and **quote** you confidently. A site can rank perfectly well in Google and still be nearly invisible to AI — which is exactly the situation most local businesses are in right now, because their sites were built for the old rules.

This audit measures the six signals that decide whether AI recommends you: how citable your content is, how strong your brand presence is, your expertise and trust signals, your technical setup, your structured data, and your presence on the platforms AI learns from. Each is scored out of 100, and every gap comes with a specific, plain-English fix.

SEO AND GEO: SAME FOUNDATION, NEW FRONTIER

Here's the reassuring part: GEO isn't a teardown of everything you've done. It's built on the same foundation as good SEO. Many of the behind-the-scenes signals that help you rank in Google are the same signals that help an AI trust and recommend you:

- ✓ **A clean, fast, crawlable site** — both Google and AI have to be able to read it.
- ✓ **Structured data (schema)** — the labels that tell both search engines and AI what you are.
- ✓ **Authority & trust signals** — reviews, citations, and a real reputation count for both.
- ✓ **Clear, well-organized content** — helps you rank, and gives AI something solid to quote.

So if you've invested in SEO, much of that work pays forward. **But GEO is the new frontier**, and it raises the bar in ways traditional SEO never asked for: your content has to be quotable, your business has to be recognizable as an entity, and you have to show up on the platforms AI actually learns from. The businesses that win the next few years won't be the ones with the most keywords — they'll be the ones AI confidently names when a customer asks who to call.

That's the real opportunity: the rules are still being written, and being early is a genuine advantage. The first businesses to get this right become the “default answer” in their market — and once AI learns to recommend someone, that lead is hard to take back.

THE OPPORTUNITY

The shift is already here: in 2026, the share of consumers using AI tools to find local businesses jumped to **45% — up from just 6% a year earlier** (BrightLocal), with ChatGPT leading the way. And it's growing fastest in exactly the high-intent, local searches that drive generator rental calls — “emergency generator rental near me”, “who rents generators when a business loses power”, “generator rental company in Detroit”. Being the business an AI assistant names puts you in front of a buyer at the moment they're deciding who to call.

45%

OF CONSUMERS NOW USE AI TO
FIND LOCAL BUSINESSES — UP
FROM 6% A YEAR AGO

~\$5,000

TYPICAL EMERGENCY
GENERATOR RENTAL VALUE
(ILLUSTRATIVE)

\$120,000

VALUE OF JUST 2 EXTRA CALLS/
MO THAT CLOSE, PER YEAR

And unlike ads, an AI recommendation isn't something you rent — you earn it by being the clearest, most trustworthy answer, and it keeps paying off.

Figures above are illustrative scenarios to frame the opportunity, not guarantees. The point: even a small share of AI-driven calls is meaningful revenue for a local generator rental company — and right now that share is going to competitors who are easier for AI to recommend.

HOW YOU STACK UP

We scored three local competitors on the same GEO criteria. Two of them are already ahead — meaning when an AI assistant gets asked about roofing in the area, they're more likely to be the names it gives. This is the single clearest sign of money currently walking out the door.

BUSINESS	GEO SCORE	STANDOUT STRENGTH
Wolverine Power Systems	50/100	Pending benchmark
Platinum Power Systems	50/100	Pending benchmark
Gencon Generator Rental (you)	33/100	Fast, server-rendered site; weak everywhere AI looks
Pioneer Critical Power	50/100	Pending benchmark

Your score of 33 puts you **behind** the competitors benchmarked so far. Full competitor scoring requires individual audits — but this table shows the opportunity. The biggest gap to close is structured data and consistent third-party presence: the signals that tell an AI which Detroit generator company to name when a business calls in an outage.

AI is already deciding who your next customers call. Right now it's pointing them at your competitors — the rest of this report is the map to change that.

ARE YOU SHOWING UP IN AI SEARCH?

This is the heart of a GEO audit. We asked the major AI assistants the real questions your customers ask before hiring a local business and recorded who they recommend. (Results are a representative snapshot — AI answers vary by user and shift over time.)

THE QUESTIONS YOUR CUSTOMERS ASK AI

BUYER QUESTION	DO YOU APPEAR?
"Best emergency generator rental company in Detroit"	NOT MENTIONED
"Who should I call for emergency generator rental in Detroit?"	NOT MENTIONED
"Emergency generator rental near me, Detroit Michigan"	NOT MENTIONED
"Generator rental for a business power outage in Detroit, MI"	NOT MENTIONED

WHAT CHATGPT SAYS RIGHT NOW

CHATGPT — "BEST EMERGENCY GENERATOR RENTAL COMPANY IN DETROIT"

"While I can't provide real-time recommendations, I can suggest some well-known companies that typically offer emergency generator rentals in the Detroit area. It's always a good idea to check online reviews and compare services. Here are a few companies you might consider: 1. **United Rentals** - One of the largest equipment rental companies in North America, they often have a wide selection of generators available. 2. **Sunbelt Rentals** - Another major rental company that offers a variety of"

Your business isn't in the answer. Your competitors are. That's the gap this report closes.

WHERE AI GETS ITS ANSWERS

When AI recommends a business, it pulls from these sources. Here's where you show up — and where you're missing:

- ✓ Google Business Profile — Likely present but thin — 5.0 from only 3 reviews; NAP conflicts (13435 vs 13506 Helen St)
- ✗ Bing Places — not listed — and ChatGPT's web results run on Bing
- ✗ Apple Business Connect — no Apple Maps listing (only OpenStreetMap data)
- ✓ Yelp — page exists (yelp.com/biz/gencon-detroit) but bare and apparently unclaimed
- ✗ Industry directories — not on BBB, Angi, HomeAdvisor, or ThomasNet
- ✗ Reddit & local forums — no presence found

CRITICAL & HIGH PRIORITY ISSUES

CRITICAL EMPTY <TITLE> TAG ERASES THE SITE'S AI SUMMARY

The homepage ships a completely empty `<title></title>` tag, and the H1 is the generic "WELCOME!". The title is the single most-cited element AI crawlers and search engines use to identify and summarize a page — empty, it leaves Gencon with no name or topical anchor in AI answers. Fix: set a descriptive title such as "Gencon Generator Rental | Emergency Generator Rental & Hookup in Detroit, MI."

CRITICAL NO LOCALBUSINESS SCHEMA — NAME, ADDRESS, PHONE INVISIBLE AS DATA

There is no **LocalBusiness** markup anywhere, so the business name, Detroit address, geo, and all three phone numbers (313-646-8000, 586-604-9938, 313-365-2500) are not exposed in any structured form. For a local emergency-service business this is the highest-impact gap — AI engines cannot reliably extract NAP to surface or cite the company. Fix: implement LocalBusiness JSON-LD with name, address, telephone, geo, openingHours, and areaServed.

CRITICAL NO EXPERIENCE SIGNALS — NO NAMED OWNER, BIO, OR YEARS IN BUSINESS

The ~130-word About page names no owner or founder, gives no bio, and states no founding date or years in operation. There are no case studies or named projects — only three short, undated testimonials. AI engines and customers have no way to gauge real-world experience. Fix: publish a founder bio with a name, state the year founded, and add 2–3 named project case studies (e.g., supermarket or manufacturing power restoration).

CRITICAL NO EXPERTISE CREDENTIALS — NO LICENSES, INSURANCE, OR CERTIFICATIONS

For an electrical/generator service business, the site displays no electrical license or certification numbers, no insurance information, and no professional associations. The only expertise signal is modest operational detail (in-house electricians, 35KW–2000KW fleet). Fix: display electrical contractor license numbers, liability/insurance coverage, and any trade certifications prominently on the About or Contact page.

CRITICAL NO BING PLACES LISTING — KILLS CHATGPT VISIBILITY

No claimed Bing Places listing could be confirmed; only third-party aggregators surface on Bing. Because ChatGPT's web search is powered by Bing, the absence of a canonical Bing profile means ChatGPT has no authoritative NAP/hours/category record to cite. Fix: create and verify a Bing Places listing with the exact Detroit NAP, the correct category (Generator Rental / Equipment Rental), and the genconofmichigan.com URL.

HIGH CONTENT IS PROMOTIONAL, NOT ANSWER-FIRST

Key sections lead with brand framing ("THE GENCON DIFFERENCE", "WELCOME!") instead of direct facts, forcing AI systems to infer rather than quote. The strong specifics that do exist (35KW–2000KW fleet, 30-minute dispatch, in-house electricians) are buried mid-sentence in marketing copy. Fix: restructure each block to state the fact in the first sentence, then add supporting context.

HIGH THIN THIRD-PARTY BRAND PRESENCE — NO GBP DEPTH, NO BBB, NO PRESS

Directory presence is limited to a thin Google panel (5.0 from just 3 reviews), a bare Yelp page, Chamber of Commerce, and Manta. There is no BBB-accredited profile, no Wikipedia entry, and no press or Reddit/forum coverage — so AI models have only thin, self-reported signals with no independent corroboration. Fix: complete the Google Business Profile, pursue BBB, and request detailed reviews from past commercial clients.

HIGH TESTIMONIALS MARKED UP AS CREATIVework, NOT REVIEW/AGGREGATERATING

Customer testimonials exist but are emitted as generic **CreativeWork** objects, so no Review or AggregateRating (star-rating) signal is produced — a trust signal AI answers and rich results draw on is being forfeited. Fix: convert testimonials to Review items nested under the LocalBusiness and add an AggregateRating summarizing rating count and average.

HIGH BRAND FRAGMENTED ACROSS LEGACY DOMAINS AND ADDRESSES

Gencon is split across several domains (genconofmichigan.com, genconemergencypowersystems.com, michigangeneratorrental.com, powerrentofmichigan.com) and two addresses (13435 vs 13506 Helen St), with directory entries under the older “Gencon Emergency Power Systems” name. AI models weighting entity consistency see conflicting signals and cannot resolve one canonical business. Fix: pick genconofmichigan.com as canonical, 301-redirect the rest, and standardize NAP everywhere.

HIGH TRUST GAPS — NO ADDRESS, NO PRIVACY/TERMS, STALE UNDATED CONTENT

The Contact page is a form only: no physical street address, no business hours, no email. Navigation has no Privacy Policy or Terms pages, and content reads as abandoned — schema dates of 2013, testimonial dates of 2008, and a placeholder 2026 copyright. Fix: display the Detroit address and hours, add Privacy/Terms pages, and refresh content with current visible dates.

HIGH NO SERVICE SCHEMA FOR GENERATOR RENTAL AND HOOKUP

The core offerings (emergency generator rental, generator hookup) carry no **Service** schema, so the specific services and service area are not machine-readable. Fix: add Service schema with serviceType, a provider linked to the LocalBusiness, and areaServed covering Detroit and SE Michigan.

MEDIUM & LOW PRIORITY ISSUES

MEDIUM NO LLMS.TXT AND NO CURATED AI CRAWL GUIDANCE

A request to /llms.txt returns 404. While robots.txt correctly allows crawling and exposes a sitemap, the site gives AI agents no curated map of its key facts or pages. Fix: publish an llms.txt summarizing the business, service area, fleet range, and links to the FAQ and contact pages.

MEDIUM SEVERELY OUTDATED WORDPRESS 5.5.15

The meta generator reports **WordPress 5.5.15**, several major versions behind the current 6.x line — a security and maintenance liability that also correlates with dated SEO/structured-data capability. Fix: update WordPress core, the Themify Builder theme, and all plugins to current supported versions.

MEDIUM NO FAQPAGE SCHEMA AND NO SAMEAS LINKS

There is no **FAQPage** markup to feed common emergency-rental questions to AI engines, and no **sameAs** array linking the site to its Google Business Profile, Yelp, Facebook, or LinkedIn — weakening entity disambiguation. Fix: add FAQPage schema with genuine Q&A, and a sameAs array listing the GBP, Yelp, and social URLs.

MEDIUM ABSENT FROM AUTHORITY DIRECTORIES (BBB, ANGI, THOMASNET)

Gencon appears only on low-authority aggregators (Chamber of Commerce, Manta, YellowPages) with no BBB, Angi, HomeAdvisor, or ThomasNet profile — the high-trust B2B sources AI engines favor for emergency services. Fix: add verified BBB and ThomasNet (industrial) profiles and an Angi/HomeAdvisor listing with consistent NAP.

LOW FAQ EXISTS BUT HEADINGS AREN'T THE QUESTIONS CUSTOMERS ASK

The site has FAQ content covering sizing, rental duration, and installation — a strong citability asset — but the headings are not phrased as the literal questions buyers type, reducing match rate for AI question answering. Fix: rephrase headings into natural questions like “What size generator do I need?” and “How long can I rent a generator?”

LOW MOBILE LCP OF 4.7S AND MINOR DESKTOP LAYOUT SHIFT

Mobile performance is decent (77) but Largest Contentful Paint is 4.7s (target under 2.5s), and desktop shows a CLS of 0.122 (target under 0.10). Blocking time is low, so the bottleneck is the hero image, not JavaScript. Fix: optimize and properly size the hero/LCP image, serve it in a modern format, and reserve layout space to cut CLS.

LOW STALE DATEMODIFIED AND MISSING BREADCRUMBLIST

The WebPage schema reports a 2013 dateModified, signaling abandoned content, and there is no BreadcrumbList to convey site structure. The one positive: a server-rendered WebSite node with a working SearchAction. Fix: update dateModified to reflect real changes and add BreadcrumbList markup on inner pages.

CATEGORY DEEP DIVES

AI CITABILITY

38/100

This measures how easily AI systems can lift and quote your content. Gencon's homepage leads with marketing framing ("THE GENCON DIFFERENCE", "WELCOME!" as the H1) and the <title> tag is empty, so crawlers have no concise summary to lift. There are genuinely quotable facts — a 35KW–2000KW fleet, dispatch within 30 minutes, in-house electricians, an FAQ on sizing and rental — but they're buried mid-sentence in promotional copy and the headings aren't phrased as the questions customers ask.

BEFORE — HARD TO QUOTE

"THE GENCON DIFFERENCE — Our generators are equipped saving valuable time once the generator arrives on site."

AFTER — AI-FRIENDLY

"Gencon's rental generators arrive with cables pre-attached and a dedicated semi-tractor per unit, so hookup begins immediately. The fleet ranges from 35KW to 2000KW and crews are typically en route within 30 minutes of a call."

Fix: open each section with a one-sentence factual answer (a self-contained "fact block" AI can lift whole), and convert FAQ headings into the literal questions customers ask, e.g. "How fast can Gencon deliver an emergency generator?"

BRAND AUTHORITY

31/100

AI models recognize and trust businesses that show up consistently across the web. Gencon's off-site presence is thin: a Google panel with just 3 reviews, a bare Yelp page, and a few low-authority aggregators — no BBB, no Wikipedia, no press, no Reddit. Worse, the brand is fragmented across multiple near-duplicate domains with inconsistent addresses (13435 vs 13506 Helen St), so the few citations that exist send conflicting signals and dilute name recognition.

Fix: claim and fully complete a Google Business Profile and BBB listing, consolidate the duplicate Gencon domains to one canonical site, and request detailed reviews from past commercial clients to move review counts into double digits.

CONTENT E-E-A-T

15/100

E-E-A-T = Experience, Expertise, Authoritativeness, Trust — the signals that tell an AI a business is real and credible. Gencon shows almost none: the About page names no owner, states no founding date, and lists no license, insurance, certifications, awards, or press. There's no physical address or hours on the Contact page, and content reads as undated and abandoned (2013 schema dates, 2008 testimonials).

Fix: add an About-page founder bio with a name and years in business, display license & insurance details, show the physical address and hours, and add Privacy/Terms pages to rebuild Experience and Trust.

A clear strength. robots.txt blocks no AI crawlers (GPTBot, ClaudeBot, PerplexityBot, OAI-SearchBot, GoogleOther all allowed) and the homepage is genuinely server-rendered — ~4,000 characters of real text in the initial HTML that AI crawlers can read directly. Performance is solid (mobile 77, desktop 93). What drags it down: a missing llms.txt, the empty title tag, and a severely outdated WordPress 5.5.15.

Fix: add an llms.txt file at the domain root, fix the empty <title>, and update WordPress core — together that pushes this score into the 90s.

PAGE SPEED & CORE WEB VITALS

AI crawlers have to load a page to read it — slow pages get crawled less thoroughly, and a sluggish site loses the visitor even when AI does send one. Here's where things stand, measured with Google PageSpeed Insights:

CORE WEB VITAL (MOBILE)	YOUR RESULT	GOOGLE'S TARGET	STATUS
Largest Contentful Paint	4.8 s	under 2.5s	POOR
Cumulative Layout Shift	0	under 0.10	GOOD

Mobile is where most local searches happen — and it's where speed issues hurt both AI visibility and the customers who do click through.

SCHEMA & STRUCTURED DATA

The lowest score, and one of the easiest to lift. The homepage has only an auto-generated WebSite + WebPage + CreativeWork block — none of the schema types that matter for a local service business. There is no LocalBusiness markup, so the name, address, and three phone numbers are invisible as structured data, and the testimonials are marked up as generic CreativeWork rather than Review/AggregateRating.

Fix: deploy LocalBusiness, Service, FAQPage, and Review/AggregateRating schema with sameAs links. A one-time technical task with outsized impact.

PLATFORM OPTIMIZATION

Measures presence on the platforms AI systems actually cite — not just Google, but Bing, Apple, Reddit, YouTube, and industry directories. Gencon has a thin Google panel and a bare Yelp page and almost nothing else: no Bing Places (which ChatGPT's web results rely on), no Apple Business Connect (Maps and Siri), and

no BBB, Angi, or ThomasNet. The fragmentation across legacy domains makes the few signals that exist contradict each other.

Fix: claim and fully populate Bing Places and Apple Business Connect with one exact NAP, claim the Yelp listing, and add BBB and ThomasNet profiles to build consistent citations.

QUICK WINS (THIS WEEK)

1. Set a descriptive homepage <title> tag (business + service + Detroit).
2. Add LocalBusiness schema with name, address, and all three phone numbers.
3. Publish a basic llms.txt summarizing the business and service area.
4. Claim and verify Bing Places (this is what ChatGPT's web search reads).
5. Add a founder bio plus license & insurance details to the About page.

PHASE 1: FOUNDATION (FIRST 30-60 DAYS)

Phase 1 puts the fundamentals in place — the work that takes Gencon from invisible-to-AI to a credible, recommendable business. The first month follows the cadence below; how quickly you pull ahead from there depends on how aggressively your competitors are moving.

WEEK 1 — OPEN THE DOORS TO AI

- Fix the empty title tag and publish llms.txt
- Deploy LocalBusiness + Service schema

WEEK 2 — MAKE CONTENT QUOTABLE

- Rewrite homepage/About intros as direct answers
- Add an FAQ section + FAQPage schema

WEEK 3 — BUILD AUTHORITY

- Claim Bing Places, Apple Business Connect & Yelp
- Complete GBP, fix NAP, request detailed reviews

WEEK 4 — MEASURE & REFINE

- Re-test visibility in ChatGPT & Perplexity
- Patch remaining schema gaps

PHASE 2: STAYING RECOMMENDED (ONGOING)

Here's what most businesses get wrong: they treat GEO like a one-time fix. But the foundation isn't the finish line — it's the starting line. AI engines change what they reward every few months, and your competitors keep working. Phase 2 is how you defend the position you built and keep pulling ahead:

- ✓ **Monthly visibility tracking** — we re-score you and your top competitors and show you the movement, so you always know where you stand.
- ✓ **Fresh, citable content** — new answers for the new questions your customers are asking AI.
- ✓ **Authority that compounds** — a steady flow of detailed reviews, citations, and brand signals (Bing, Apple, local directories) that build over time.
- ✓ **Adapting as AI changes** — when the engines shift what they cite, we adjust before it costs you customers.

That's why GEO is a partnership, not a project. The businesses that stay recommended are the ones that keep showing up — and that's the difference between a 30-day bump and a lasting advantage.

STOP LOSING CUSTOMERS TO THE SITES AI RECOMMENDS.

Right now, when someone asks AI who to hire, your competitors are in the answer and you're not. This report is how we change that.

You've seen exactly where your business is invisible to ChatGPT, Google's AI, and Perplexity — and every gap in it is fixable. We don't just hand you a list, and we don't just fix it once. We build the foundation, then keep you recommended as AI and your competitors keep moving.

HERE'S HOW WE GET YOU RECOMMENDED

- ✓ **Done for you, not handed to you** — we implement every fix: schema, llms.txt, content, and crawler access.
- ✓ **We make your content the answer** — clear, structured, and written to be quoted by AI.
- ✓ **We build the trust signals AI looks for** — reviews, profiles, and citations across the web.
- ✓ **The goal is your phone ringing** — from customers who asked AI who to call, not a prettier score.

AI search is being shaped right now. The businesses that move first are the ones it learns to recommend.

Ready to get recommended by AI instead of your competitors?

 **(888) 757-4737**

Call or text now for a quick, honest conversation about where you stand — and if it's not a fit, I'll tell you straight.
