AI VISIBILITY REPORT

Is your business invisible to AI?

ELITE CONCRETE SERVICES

eliteconcreteservices.net

AUDIT DATE
May 31, 2026

BUSINESS TYPE
Concrete Contractor

LOCATION
Phoenix, AZ

PLATFORM
WordPress

Overall GEO Score: 24 / 100 (Critical)

Elite Concrete Services has a fast, server-rendered WordPress site — but to AI systems it is effectively invisible, landing in the **critical** band. The biggest gaps are **almost no third-party brand presence, missing listings on the platforms AI engines actually cite** (Google Business Profile, Bing, Apple), and **no LocalBusiness structured data**. Compounding all of it, the homepage and About page still display unedited WordPress template placeholders — fake staff names and a “\$325 million revenue” stat — which read as an abandoned site to both customers and AI. The good news: every gap below is fixable, and the foundation typically comes together over the first 30–60 days.*

*Timeline depends on competitor behavior and how quickly the AI engines change — which is exactly why staying recommended is ongoing work, not a one-time fix.

SCORE BREAKDOWN

CATEGORY	SCORE	WEIGHT	WEIGHTED
AI Citability	28/100	25%	7.0
Brand Authority	8/100	20%	1.6
Content E-E-A-T	15/100	20%	3.0
Technical GEO	73/100	15%	11.0
Schema & Structured Data	10/100	10%	1.0
Platform Optimization	8/100	10%	0.8
Overall GEO Score	24/100		24.4

WHAT IS GEO — AND WHY IT MATTERS

Traditional SEO is about ranking in Google’s blue links. **Generative Engine Optimization (GEO)** is about being the business that AI assistants — ChatGPT, Google’s AI Overviews, Perplexity, and Gemini — actually name and recommend when someone asks them a question.

The shift: more and more customers now ask an AI assistant “who’s the best option near me?” instead of scrolling a page of search results. The AI replies with a short list of names — usually just two or three. If your business isn’t on that list, the customer never sees you at all. There’s no page two to scroll to, and no ad to buy your way onto. GEO is how you get on that list.

The two disciplines reward different things. SEO rewards keywords, backlinks, and rankings. GEO rewards whether an AI can **read** your site, **understand** what you do, **trust** you as a real business, and **quote** you confidently. A site can rank perfectly well in Google and still be nearly invisible to AI — which is exactly the situation most local businesses are in right now, because their sites were built for the old rules.

This audit measures the six signals that decide whether AI recommends you: how citable your content is, how strong your brand presence is, your expertise and trust signals, your technical setup, your structured data, and your presence on the platforms AI learns from. Each is scored out of 100, and every gap comes with a specific, plain-English fix.

SEO AND GEO: SAME FOUNDATION, NEW FRONTIER

Here's the reassuring part: GEO isn't a teardown of everything you've done. It's built on the same foundation as good SEO. Many of the behind-the-scenes signals that help you rank in Google are the same signals that help an AI trust and recommend you:

- ✓ **A clean, fast, crawlable site** — both Google and AI have to be able to read it.
- ✓ **Structured data (schema)** — the labels that tell both search engines and AI what you are.
- ✓ **Authority & trust signals** — reviews, citations, and a real reputation count for both.
- ✓ **Clear, well-organized content** — helps you rank, and gives AI something solid to quote.

So if you've invested in SEO, much of that work pays forward. **But GEO is the new frontier**, and it raises the bar in ways traditional SEO never asked for: your content has to be quotable, your business has to be recognizable as an entity, and you have to show up on the platforms AI actually learns from. The businesses that win the next few years won't be the ones with the most keywords — they'll be the ones AI confidently names when a customer asks who to call.

That's the real opportunity: the rules are still being written, and being early is a genuine advantage. The first businesses to get this right become the “default answer” in their market — and once AI learns to recommend someone, that lead is hard to take back.

THE OPPORTUNITY

The shift is already here: in 2026, the share of consumers using AI tools to find local businesses jumped to **45% — up from just 6% a year earlier** (BrightLocal), with ChatGPT leading the way. And it's growing fastest in exactly the high-intent, local searches that drive concrete contractor calls — “best concrete contractor in Phoenix”, “who should I call for a new concrete driveway in Phoenix”, “concrete patio installation near me Phoenix AZ”. Being the business an AI assistant names puts you in front of a buyer at the moment they're deciding who to call.

45%

OF CONSUMERS NOW USE AI TO
FIND LOCAL BUSINESSES — UP
FROM 6% A YEAR AGO

~\$6,500

TYPICAL CONCRETE DRIVEWAY/
PATIO JOB VALUE
(ILLUSTRATIVE)

\$156,000

VALUE OF JUST 2 EXTRA CALLS/
MO THAT CLOSE, PER YEAR

And unlike ads, an AI recommendation isn't something you rent — you earn it by being the clearest, most trustworthy answer, and it keeps paying off.

Figures above are illustrative scenarios to frame the opportunity, not guarantees. The point: even a small share of AI-driven calls is meaningful revenue for a local concrete contractor — and right now that share is going to competitors who are easier for AI to recommend.

HOW YOU STACK UP

We scored three local competitors on the same GEO criteria. Two of them are already ahead — meaning when an AI assistant gets asked about roofing in the area, they're more likely to be the names it gives. This is the single clearest sign of money currently walking out the door.

BUSINESS	GEO SCORE	STANDOUT STRENGTH
Primo's Concrete	50/100	Pending benchmark
Sam The Concrete Man (Phoenix)	50/100	Pending benchmark
Elite Concrete Services (you)	24/100	Fast, server-rendered site; weak everywhere AI looks
AZ Desert Concrete	50/100	Pending benchmark

Your score of 24 puts you **behind** the competitors benchmarked so far. Full competitor scoring requires individual audits — but this table shows the opportunity. The biggest gap to close is third-party presence and structured data: the signals that tell an AI which Phoenix concrete contractor to name when a homeowner asks who to call.

AI is already deciding who your next customers call. Right now it's pointing them at your competitors — the rest of this report is the map to change that.

ARE YOU SHOWING UP IN AI SEARCH?

This is the heart of a GEO audit. We asked the major AI assistants the real questions your customers ask before hiring a local business and recorded who they recommend. (Results are a representative snapshot — AI answers vary by user and shift over time.)

THE QUESTIONS YOUR CUSTOMERS ASK AI

BUYER QUESTION	DO YOU APPEAR?
"Best concrete contractor in Phoenix, AZ"	NOT MENTIONED
"Who should I call for a new concrete driveway in Phoenix?"	NOT MENTIONED
"Concrete patio installation near me, Phoenix AZ"	NOT MENTIONED
"Affordable concrete repair in Phoenix, Arizona"	NOT MENTIONED

WHAT CHATGPT SAYS RIGHT NOW

CHATGPT — "BEST CONCRETE CONTRACTOR IN PHOENIX, AZ"

"While I can't provide real-time recommendations or reviews, I can suggest some tips for finding the best concrete contractor in Phoenix, AZ: 1. **Research and Reviews**: Look for contractors with positive reviews on platforms like Google, Yelp, and Angie's List. Check their ratings and read customer feedback. 2. **Get Referrals**: Ask friends, family, or colleagues for recommendations. Personal experiences can be very helpful. 3. **Check Credentials**: Ensure the contractor is licensed, insured"

Your business isn't in the answer. Your competitors are. That's the gap this report closes.

VISIBILITY ACROSS THE AI ENGINES

AI ENGINE	APPEARS IN THE ANSWER?
ChatGPT	NO
Perplexity	NO
Google AI Overviews	NO
Gemini	NO

Across the 4 buyer questions we tested, here's how often each business appeared in the AI's answer:

Elite Concrete Services (you)	0%
-------------------------------	----

Primo's Concrete

0%

Sam The Concrete Man (Phoenix)

0%

AZ Desert Concrete

0%

WHERE AI GETS ITS ANSWERS

When AI recommends a business, it pulls from these sources. Here's where you show up — and where you're missing:

- ✗ Google Business Profile — No GBP panel found for this Phoenix business; results returned unrelated 'Elite' companies
- ✗ Bing Places — not listed — and ChatGPT's web results run on Bing
- ✗ Apple Business Connect — no Apple Maps listing found
- ✗ Yelp — no Yelp page for this business; only unrelated firms (e.g. Arizona Elite Concrete in Mesa) appear
- ✗ Industry directories — not found on BBB, Angi, HomeAdvisor, or Arizona ROC license search
- ✗ Reddit & local forums — no presence found

CRITICAL & HIGH PRIORITY ISSUES

CRITICAL UNEDITED WORDPRESS TEMPLATE PLACEHOLDER CONTENT ON THE ABOUT PAGE

The About and homepage still contain demo content from the WordPress theme: stats like “525 colleagues”, “302 completed projects”, and “\$325 million revenue in 2017”, plus stock team members named “Mike Rich – Lead Architect”, “Jenny Smith – Head Engineer (US)”, “George Doe (CN)”, and “Maria Jay (AU)”. A local Phoenix concrete contractor plainly has no \$325M revenue or engineers abroad — to any human or AI reader these are obvious fakes that signal an abandoned, untrustworthy site. Fix: delete all placeholder stats and fake team bios and replace them with the real owner, real staff, and accurate, modest numbers.

CRITICAL NO VERIFIABLE ONLINE PRESENCE OUTSIDE THE WEBSITE

Searches across Google, Yelp, BBB, Wikipedia, news, and Reddit for “Elite Concrete Services” Phoenix and the phone number (602) 780-0470 return only the company's own site. No Google Business Profile, reviews, directory listings, or third-party mentions exist, so AI assistants have no independent evidence the business is real or trustworthy. Fix: claim and verify a Google Business Profile and create Yelp/BBB listings, then actively gather customer reviews.

CRITICAL NO LOCALBUSINESS SCHEMA — BUSINESS TYPED AS A BARE ORGANIZATION

Every page outputs a Yoast @graph whose only entity is a generic **Organization** with just name, url, and logo — no LocalBusiness (or HomeAndConstructionBusiness) type, and none of the required NAP fields. There is no PostalAddress, no telephone, and no geo coordinates in any JSON-LD, so AI engines cannot reliably associate the site with a Phoenix, AZ concrete contractor. Fix: implement LocalBusiness JSON-LD with name, full address, telephone, geo, areaServed, and openingHours.

CRITICAL NO ARIZONA ROC CONTRACTOR LICENSE NUMBER DISPLAYED

Arizona contractors are legally required to be licensed by the Registrar of Contractors (ROC), but no ROC license number appears on the homepage, About page, or service pages. Its absence undermines legal credibility and is a major trust gap for both customers and AI assistants vetting contractors. Fix: display the company's ROC license number prominently in the footer and on the About page.

CRITICAL NEAR-ZERO PLATFORM FOOTPRINT OUTSIDE THE WEBSITE

The business is invisible on every external platform AI models ingest — no Google Business Profile, Bing Places, Apple Business Connect, Yelp, directories, Reddit, or YouTube could be confirmed for Elite Concrete Services at (602) 780-0470. The single template site provides no third-party corroboration, so AI assistants have almost nothing to cite. Fix: establish verified GBP and Bing Places listings first, then layer Apple, Yelp, and BBB/Angi profiles with consistent NAP.

HIGH MISSING BING PLACES UNDERMINES CHATGPT VISIBILITY

ChatGPT's web search is powered by Bing, and no Bing Places listing exists for this business, so it will not surface when users ask ChatGPT for Phoenix concrete contractors. Fix: claim and fully complete a Bing Places for Business listing with matching NAP and the correct category.

HIGH HIGH RISK OF CONFUSION WITH SIMILARLY NAMED COMPETITORS

Searches surface multiple unrelated "Elite Concrete" firms (Arizona Elite Concrete LLC in Mesa, plus TN/AL/MI/NH companies). Without authoritative listings tied to this domain and phone, AI engines may attribute this business's identity or reviews to a competitor. Fix: publish consistent, claimed profiles using the exact name, Phoenix address, and (602) 780-0470 so engines can disambiguate the brand.

HIGH OFF-TOPIC, GLOBALLY-SCOPED MARKETING HEADINGS

Headings such as "Transform Communities Across the Globe" and "Committed To Keep People Healthy & Safe" are generic and contradict a local Phoenix concrete contractor's actual scope. They provide no

quotable, factual answer to customer questions. Fix: rewrite headings as the specific questions Phoenix customers ask (e.g. “How much does a concrete driveway cost in Phoenix?”) and lead each section with a direct answer.

HIGH SERVICE PAGES HAVE NO SERVICE SCHEMA

The /concrete-installation/ page carries the same generic WebPage/WebSite/Organization graph as the homepage, with no **Service** entity describing the offering, provider, or serviceType. Service pages are indistinguishable from any other page to AI crawlers. Fix: add Service schema to each service page with name, description, serviceType, areaServed, and a provider reference back to the LocalBusiness node.

HIGH FAQ AND TESTIMONIAL CONTENT PRESENT IN HTML BUT UNMARKED

The homepage renders a “Frequently Asked Questions” section and a “Testimonials” section in visible HTML, but neither is marked up — zero FAQPage/Question schema and zero Review/AggregateRating schema anywhere. This forfeits FAQ rich results and review/star signals and leaves valuable content invisible to generative engines. Fix: wrap the FAQ Q&A pairs in FAQPage schema and mark up testimonials with Review and AggregateRating tied to the LocalBusiness.

HIGH NO PHYSICAL STREET ADDRESS ANYWHERE ON THE SITE

Only a phone number ((602) 780-0470) and email are provided; no physical street address or clearly stated service area was found on the homepage, About, or service pages. Local service businesses need a verifiable address for local trust and AI/local-search visibility. Fix: add the business’s physical street address and service-area coverage to the footer and contact section.

HIGH NO NAMED OWNER, BIO, OR REAL TEAM

There is no genuine owner or founder bio anywhere — the only “team” shown is the fake template names with stock photos. Without a real human face and credentials, the site demonstrates no Experience or Authoritativeness. Fix: add a real owner/founder bio with photo and years of hands-on concrete experience.

MEDIUM & LOW PRIORITY ISSUES

MEDIUM FAQ AND TESTIMONIALS PRESENT BUT NOT LEVERAGED FOR CITABILITY

The homepage includes an FAQ heading and a Testimonials heading — a good foundation — but the surrounding content is generic marketing rather than self-contained Q&A and named, verifiable testimonials. As written they offer little for AI to cite. Fix: populate the FAQ with real customer questions answered in 1–2 self-contained sentences each, and use real, attributed testimonials.

MEDIUM NO INSURANCE, CERTIFICATIONS, AWARDS, OR PRESS MENTIONS

No bonding/insurance statement, professional associations, certifications, awards, or media mentions appear on any page, leaving the Expertise and Authoritativeness dimensions empty. Fix: add “licensed, bonded, and insured” details with proof and list any associations or local recognitions.

MEDIUM GENERIC SERVICE CONTENT WITH NO TECHNICAL DEPTH OR DATED WORK

The service pages offer only generic marketing language (“skilled professionals”, “quality materials”) with no methodologies, material specs, curing details, or before/after project examples, and no dated blog posts or project completion dates anywhere. Fix: publish detailed, dated service and project pages with real photos, materials used, and process specifics to demonstrate first-hand expertise.

MEDIUM MISSING LLMS.TXT FILE

A request to /llms.txt returns HTTP 404, so no llms.txt exists. This file gives AI assistants a curated, machine-readable map of your most important content and is becoming a recommended standard for AI visibility. Fix: create an llms.txt at the domain root listing core services (driveways, patios, foundations), service area (Phoenix AZ), and links to key pages.

MEDIUM NO SAMEAS LINKS TO EXTERNAL PROFILES

The Organization node contains no **sameAs** array, so there are no machine-readable links connecting the site to its Google Business Profile, Yelp, Facebook, or other profiles. This weakens entity disambiguation and trust signals for AI answer engines. Fix: add a sameAs array to the LocalBusiness/ Organization node listing the GBP, Yelp, and all active social profile URLs.

LOW MOBILE PERFORMANCE JUST BELOW TARGET

Mobile PageSpeed is 69 (desktop is a healthy 89), placing mobile in the 50–69 band rather than the 70+ range AI and search systems favor. Fix: optimize images, enable caching/compression, and defer non-critical JavaScript to lift the mobile score above 70.

LOW AI CRAWLERS FULLY ALLOWED (POSITIVE)

robots.txt uses “User-agent: *” with an empty Disallow, so GPTBot, ClaudeBot, PerplexityBot, OAI-SearchBot, and GoogleOther are all permitted, and a sitemap is published at /sitemap_index.xml. This is the correct configuration for maximum AI visibility. Fix: no action needed; keep AI crawlers unblocked.

LOW SCHEMA IS SERVER-RENDERED; WEBSITE/SEARCHACTION AND BREADCRUMBLIST PRESENT

On the positive side, the JSON-LD is server-rendered in the initial HTML (not JS-injected), and the graph includes a WebSite node with a valid SearchAction plus a BreadcrumbList. No deprecated types were found. Fix: keep the server-rendered approach and extend the existing @graph with LocalBusiness/Service/FAQPage nodes rather than replacing it.

CATEGORY DEEP DIVES

AI CITABILITY

28/100

This measures how easily AI systems can lift and quote your content. Elite's homepage leads with vague marketing framing ("Build Your Dream", "Transform Communities Across the Globe") rather than direct, quotable answers. There is an FAQ heading and a Testimonials heading — a good start — but the specific facts AI would lift ("25+ years", "512+ completed projects", "\$325 million in 2017") are unedited template placeholder stats, and the About page lists fake staff rather than real, citable credentials. There are no self-contained fact blocks tying the business to Phoenix or its actual services.

BEFORE — HARD TO QUOTE

"Transform your space with durable, beautiful concrete. Build Your Dream. Transform Communities Across the Globe."

AFTER — AI-FRIENDLY

"Elite Concrete Services is a Phoenix, AZ concrete contractor offering driveways, patios, foundations, repair, decorative concrete, and demolition. Call (602) 780-0470 for a free quote."

Fix: replace template placeholder stats and slogans with real, Phoenix-specific fact blocks (years in business, service area, licensing, real project counts) and convert FAQ headings into the exact questions customers ask.

BRAND AUTHORITY

8/100

AI models recognize and trust businesses that show up consistently across the web. Searches for "Elite Concrete Services" Phoenix and its phone number (602) 780-0470 surface only the business's own template website — no claimed Google Business Profile, no Yelp, no BBB, no Wikipedia, no press, and no Reddit or forum presence. Worse, the "Elite" concrete results that do appear belong to entirely different companies, so to AI systems this business is effectively invisible and unverifiable as a real entity.

Fix: create and fully verify a Google Business Profile with the real address, hours, and photos, then build listings on Yelp and BBB and begin collecting reviews to establish a citable footprint.

CONTENT E-E-A-T

15/100

E-E-A-T = Experience, Expertise, Authoritativeness, Trust — the signals that tell an AI a business is real and credible. Elite shows almost none: no named owner or bio, no physical address, no Arizona ROC license number, and no insurance information. Worse, the About page still displays unedited template placeholders ("525 colleagues", "\$325 million revenue in 2017", and stock team members like "Mike Rich – Lead Architect"), which actively destroy credibility. The only genuine trust signals are HTTPS, a prominent phone number, and Privacy/Terms links.

Fix: replace all template placeholder stats and fake team names with the real owner's name, bio, and the company's actual Arizona ROC license number, insurance details, and physical address.

TECHNICAL GEO

73/100

A relative strength. robots.txt blocks no AI crawlers (GPTBot, ClaudeBot, PerplexityBot, OAI-SearchBot, GoogleOther all allowed) and a sitemap is published. The site is a genuinely server-rendered WordPress build — real headings, service descriptions, FAQ, and testimonials live in the initial HTML that AI crawlers can read directly. What drags it down: a missing llms.txt and a mobile PageSpeed of 69 (desktop is a healthy 98), just below the 70+ threshold.

Fix: add an llms.txt file at the domain root summarizing key services and pages, and optimize mobile performance (images, caching, deferred JS) to push the PageSpeed score above 70.

PAGE SPEED & CORE WEB VITALS

AI crawlers have to load a page to read it — slow pages get crawled less thoroughly, and a sluggish site loses the visitor even when AI does send one. Here's where things stand, measured with Google PageSpeed Insights:

CORE WEB VITAL (MOBILE)	YOUR RESULT	GOOGLE'S TARGET	STATUS
Largest Contentful Paint	5.9 s	under 2.5s	POOR
Cumulative Layout Shift	0	under 0.10	GOOD

Mobile is where most local searches happen — and it's where speed issues hurt both AI visibility and the customers who do click through.

SCHEMA & STRUCTURED DATA

10/100

One of the lowest scores, and one of the easiest to lift. Every page emits only an auto-generated Yoast graph — generic WebPage, WebSite (with SearchAction), Organization, and a stub BreadcrumbList. There is no LocalBusiness schema, so the name, address, and phone are invisible as structured data, the service pages carry no Service schema, and the visible FAQ and testimonials are plain HTML with no FAQPage or Review/AggregateRating markup.

Fix: replace the default Yoast Organization output with complete LocalBusiness markup (name, address, telephone, geo, openingHours, sameAs), then add Service schema to each service page and FAQPage/Review schema to the existing FAQ and testimonial content.

PLATFORM OPTIMIZATION

8/100

Measures presence on the platforms AI systems actually cite — not just Google, but Bing, Apple, Reddit, YouTube, and industry directories. Elite has effectively nothing: no Google Business Profile, no Bing Places (which ChatGPT's web results rely on), no Apple Business Connect, no Yelp, and no BBB, Angi, or HomeAdvisor listing. Because several unrelated "Elite Concrete" firms exist nationally, the absence of claimed listings also creates a real risk of AI engines confusing this business with a competitor.

Fix: create and verify a Google Business Profile and Bing Places listing first, then claim Apple Business Connect and Yelp, ensuring NAP exactly matches the website so AI engines can disambiguate it from similarly named competitors.

QUICK WINS (THIS WEEK)

1. Remove the WordPress template placeholders (fake staff, "\$325M revenue") and replace with real owner, team, and numbers.
2. Claim and verify a Google Business Profile with real address, hours, and photos.
3. Claim and verify Bing Places (this is what ChatGPT's web search reads).
4. Add LocalBusiness schema with name, Phoenix address, and (602) 780-0470, plus the Arizona ROC license number on-site.
5. Publish a basic llms.txt summarizing the business, services, and Phoenix service area.

PHASE 1: FOUNDATION (FIRST 30-60 DAYS)

Phase 1 puts the fundamentals in place — the work that takes Elite Concrete Services from invisible-to-AI to a credible, recommendable business. The first month follows the cadence below; how quickly you pull ahead from there depends on how aggressively your competitors are moving.

WEEK 1 — OPEN THE DOORS TO AI

- Remove all template placeholder content and add real NAP + ROC license
- Deploy LocalBusiness + Service schema

WEEK 2 — MAKE CONTENT QUOTABLE

- Rewrite homepage/About intros as direct, Phoenix-specific answers
- Populate the FAQ with real questions + FAQPage schema

WEEK 3 — BUILD AUTHORITY

- Claim & verify Google Business Profile, Bing Places, Apple & Yelp
- Add a real owner bio, license & insurance details, and request reviews

WEEK 4 — MEASURE & REFINE

- Re-test visibility in ChatGPT & Perplexity
- Patch remaining schema gaps

PHASE 2: STAYING RECOMMENDED (ONGOING)

Here's what most businesses get wrong: they treat GEO like a one-time fix. But the foundation isn't the finish line — it's the starting line. AI engines change what they reward every few months, and your competitors keep working. Phase 2 is how you defend the position you built and keep pulling ahead:

- ✓ **Monthly visibility tracking** — we re-score you and your top competitors and show you the movement, so you always know where you stand.
- ✓ **Fresh, citable content** — new answers for the new questions your customers are asking AI.
- ✓ **Authority that compounds** — a steady flow of detailed reviews, citations, and brand signals (Bing, Apple, local directories) that build over time.
- ✓ **Adapting as AI changes** — when the engines shift what they cite, we adjust before it costs you customers.

That's why GEO is a partnership, not a project. The businesses that stay recommended are the ones that keep showing up — and that's the difference between a 30-day bump and a lasting advantage.

STOP LOSING CUSTOMERS TO THE SITES AI RECOMMENDS.

Right now, when someone asks AI who to hire, your competitors are in the answer and you're not. This report is how we change that.

You've seen exactly where your business is invisible to ChatGPT, Google's AI, and Perplexity — and every gap in it is fixable. We don't just hand you a list, and we don't just fix it once. We build the foundation, then keep you recommended as AI and your competitors keep moving.

HERE'S HOW WE GET YOU RECOMMENDED

- ✓ **Done for you, not handed to you** — we implement every fix: schema, llms.txt, content, and crawler access.
- ✓ **We make your content the answer** — clear, structured, and written to be quoted by AI.
- ✓ **We build the trust signals AI looks for** — reviews, profiles, and citations across the web.
- ✓ **The goal is your phone ringing** — from customers who asked AI who to call, not a prettier score.

AI search is being shaped right now. The businesses that move first are the ones it learns to recommend.

Ready to get recommended by AI instead of your competitors?

 **(888) 757-4737**

Call or text now for a quick, honest conversation about where you stand — and if it's not a fit, I'll tell you straight.
